

Programming Project: Library Project Description

For this project we will be building out a simple library catalog and circulation system.

This system needs to perform the following tasks:

1. Read the library catalog information from a json encoded file
2. Allow users to browse the catalog:
 - a. Catalog should be alphabetized by author
 - b. Browse the complete catalog
 - c. Select a specific genre to browse
 - d. Search for a specific title
3. Circulation
 - a. The system will allow a user to check a book out for 2 weeks
 - b. The system will show if a book is available or checked out
 - c. The system will show the date the book was checked out and due date.
4. Reporting
 - a. Provide a report of all books currently checked out
 - b. Provide a report of all books currently overdue

About the catalog file:

The file will be loaded from NVRAM on the control system.

The file will be named 'catalog.json'

The catalog file contains the following information about each book:

- Title
- Author
- Genre
- Description
